

A PROSPECTUS FOR CEOS & BOARDS

Three decades of building, breaking and scaling technology.

From building PCs and configuring networks at sixteen to selling software into Silicon Valley — what nearly three decades across hardware, internet, software and mobile brings to your roadmap, your margins and your risk.

Software solutions sold
into Silicon Valley

01 — THE CASE

Why a CEO should read this

The real bottleneck is rarely the technology itself — it's who is making the calls.

You don't have a technology problem. You have a **decision-making** problem with technology at the centre of it — which platform to bet on, what to build versus buy, where the next dollar of margin hides, and whether the team you have can take you where the board wants to go.

Most companies answer that by hiring an expensive full-time CTO, or by leaving the call to whoever shouts loudest in the engineering room. There is a third option that more boards are choosing: bring in someone who has already owned the whole problem — the building, the billing, the infrastructure, the financing and the exit — and rent the judgement, not the headcount.

“

I've signed the front of the cheques and the back of them. I've built the product, run the network it rode on, and financed the customers who bought it. There aren't many technology decisions I'm seeing for the first time.

02 — TRACK RECORD

An operator, not a CV of job titles

Hands-on at the leading edge of every major shift since 1997 — building it, running it, scaling it and selling it across Australia and into the US. An early adopter, every time.

1997 · YEAR 10

Started in IT at sixteen — still at school

Joined a local PC manufacturer building machines and setting up early business networks, alongside a Diploma in IT completed with Years 11 & 12 by the end of 1999.

1999 · SOFTWARE

Began custom software development in C#

An early adopter of .NET-era tooling — building bespoke business solutions from the ground up as the platform itself was emerging.

EARLY 2000S · TELECOM

Built an ISP from scratch — scaled to 16,000 customers

Founded an Internet Service Provider and grew it through the early 2000s. Running a network at that scale means the cloud holds no mystery — it's just someone else's data centre with a markup.

EARLY 2000S · GOVERNMENT

Critical infrastructure for government, NSW & QLD

Managed critical infrastructure on contracts for councils and government departments — on-site server builds with full hardware and software support.

MID 2000S · SCALE

Scaling software & systems Australia-wide

Designed, built and scaled technology for businesses right across the country — and the hardware needed to grow with them.

2008 · MOBILE

Mobile apps before the smartphone

Building for Nokia and BlackBerry operating systems years ahead of the App Store — at the front of the mobile wave before it broke.

LATE 2000S · SILICON VALLEY

Selling software into the USA

Designed and developed software for American start-ups and sold solutions to Silicon Valley companies.

TODAY · DIGITAL ONE AGENCY & AI

Still first to the frontier — now in AI

The same early-adopter instinct, applied to artificial intelligence and automation — turning 27 years of operating into fractional CTO leadership for growth businesses.

03 — SCOPE

What an engagement delivers

Senior leadership across the six areas where technology decisions make or cost you money.

STRATEGY**Roadmap tied to the P&L**

A clear 12–24 month plan where every technology bet maps to revenue, cost or risk — in language the board understands, not jargon.

ARCHITECTURE**Build vs. buy, decided right**

Hard-won judgement on what to build, what to buy and what to kill — so you stop paying for the wrong things and over-engineering the rest.

TEAM**Hiring & levelling up engineers**

Recruit the right people, fix the structure, mentor the leads, and know when you genuinely need a full-timer versus a contractor.

VENDORS**Vendor & cost control**

From an operator who has been the vendor — I negotiate contracts, audit cloud and SaaS spend, and cut the fat without breaking the system.

RISK**Security, uptime & compliance**

Infrastructure that stays up, data that stays safe, and the governance the board needs — grounded in years of running networks and regulated finance.

DILIGENCE**Investment & M&A readiness**

Technical due diligence and scalability assessments that reassure investors and acquirers your technology is an asset, not a liability.

04 — THE MODEL

Why fractional works

A full-time CTO at the seniority you actually want costs base salary, equity, bonus, super and a long tail of recruitment and ramp-up — often well north of a quarter-million a year before delivering a thing. And for most companies the role is only genuinely full-time in bursts.

Full-time CTO hire

HIGH FIXED COST · LONG COMMITMENT

- \$250k+ all-in, every year, regardless of workload
- 3-6 months to recruit, more to ramp
- One person's experience, often from one industry
- Hard and expensive to unwind if it's the wrong fit
- Frequently under-utilised once the big project lands

Fractional CTO — Digital One

FLEXIBLE COST · JUDGEMENT ON TAP

- Pay only for the leadership you actually need
- Productive in week one — no ramp, no learning curve
- 27 years across five industries, in one operator
- Scale up for a project, scale down when it's done
- Founder-grade accountability without the headcount

Fractional isn't "CTO-lite." It's senior leadership matched to the moments that need it — and an honest advisor whose incentive is your outcome, not protecting a permanent seat.

05 — WORKING TOGETHER

A clear, low-risk way in

Start small, prove value, scale the engagement to fit — never the other way around.

1 Diagnostic

A short, fixed engagement to assess your stack, team, spend and risk — with a written findings report whether or not we continue.

2 Roadmap

A prioritised plan tied to commercial outcomes, with clear owners and timelines the board can hold to.

3 Execution

Ongoing fractional leadership — a set number of days per month, embedded with your team, driving the roadmap.

4 Hand-off

When the heavy lifting is done, I help you hire the permanent team or step back to light-touch advisory. No lock-in.

Why choose us

- **Owner's mindset.** I've carried payroll and signed the leases. I treat your money like mine because for 27 years it was.
- **Unusual breadth.** Hardware, software, networks and finance in one operator — so cross-cutting calls are made by someone who's lived every side.
- **Plain English.** I translate between the engineering room and the boardroom without losing either side.
- **No empire-building.** I'll tell you when you don't need to spend, hire or build. Few full-time CTOs are incentivised to.
- **Early to every shift.** First to networking, the web, mobile and now AI — I help you adopt what matters early and ignore what's just noise.

LET'S TALK

Pressure-test your technology strategy.

Start with a no-obligation diagnostic conversation. Bring your hardest technology question — the one that's been sitting on the board agenda — and let's see what 27 years of operating makes of it.
